No PFAS

4202.14.0 does not contain intentionally added PFAs. This information is provided based on written confirmation received from our suppliers.

PFAS information

- Perfluoroalkyl and polyfluoroalkyl substances (PFAS) constitute a category of more than 8,000 chemicals characterized by the presence of fluorine atoms bonded to carbon atoms. PFAS are ubiquitous in everyday applications, such as food packaging and water-resistant clothing, owing to their oil-repellent properties.

- Certain PFAS chemicals, particularly perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), and GenX, have been identified as posing potential health or environmental risks. The Environmental Protection Agency (EPA), numerous states, and Canada have enacted or are in the process of enacting legislation that imposes restrictions on or mandates the disclosure of the use of all PFAS chemistries.

This information is being provided to you to the best of Kravet's knowledge based on written confirmation from its suppliers.

Sincerely,
Kravet LLC
