

POLYPROPYLENE COLORS by KRAVET

These polyester yarns are made to withstand the elements of daily life. UV stabilized and mildew resistant, they are both kid and pet friendly. Polypropylene is a man-made synthetic polymer fiber spun to create various yarn textures. It is inherently stain-repellant, resists most acid, alkaline, bacteria, mildew and has low moisture absorption. This set can be used to custom color a specific group of Kravet patterns. Please refer to yarns for the most accurate colors.
